

PUPMOS

W H I T E P U P P E R

ABSTRACT

Pupmos is an autonomous self-aggregating community profit protocol developing on Juno Network, driven by the pursuit of friendship, sovereignty, and interoperability. The PUPMOS token functions as a treasury-backed memetic utility asset with uses in governance, collateral, value storage and exchange in the Pupmos DAO and its community-owned smart contracts.

Claimable for free by thousands of Pupmos friends at inception, PUPMOS will be distributed widely and fairly to friends. The frendrop's spam-resistant distribution mechanisms reward loyalty, participation, and friendship above all else.

THE PUPMOS DAO

PAWS - PROFIT AGGREGATION WORKERS

PAWs are interchain decentralized smart contracts owned by the Pupmos community of friends. PAWs generate multi-asset income for PUPMOS staking rewards and the community owned treasury, which can then be allocated to fund grants for the development of more PAWs, creating a perpetual cycle of community driven value accrual.

PAW NO.1: LIQUID STAKING

Auto-compounding JUNO with validator friends.

Further detailed in the upcoming PAW 1 Whitepupper.

INTERCHAIN-NATIVE

Historically, DAO's have been limited to the scope of the blockchains upon which they were formed, bound to their birthplace like humans to the earth. The inception of the Pupmos DAO envisages the beginning of the end of this paradigm. Through IBC-enabled interoperable smart contracts, an interchain democracy may be formed and lay claim to the freedom of movement which underlies the fabric of the Cosmos ecosystem. No longer at the mercy of a single blockchain jurisdiction, it is not unforeseeable that chains could begin competing to provide the environment most suitable for the Pupmos DAO and its members.

MEMETICS

THE ONBOARDING DILEMMA

Promulgating the benefits of application-specific interoperable blockchains remains one of the Cosmos ecosystem's greatest challenges. In terms of viral phenomena, the current state of the interchain narrative is highly virulent but insufficiently infectious. That is, community members are immensely dedicated and motivated, but the cognitive load is very high for onboarding new friends into the ecosystem.

THE PUPMOS FACTOR

Pupmos posits a solution to this as the Goodest Boy in Cosmos, a loving and relatable dog with three key traits of informational viral patterns: protagonistic urgency, linguistic aberration, and anthropological universality. In advocating for his unwavering principles of friendship, sovereignty, interoperability and decentralization, Pupmos strengthens the ideological threads that bind the Cosmos ecosystem. The unique dialect, dubbed "Pupmospeak", provides a highly replicable and easily identifiable linguistic trait through mechanisms such as morphological nonconformity, atypical sentence structure and lexical playfulness. Articulating IBC (Interblockchain Communication Protocol) connections as friendships, packet transfers as dog walks, and token rewards as treats, Pupmos makes the technical nature of Cosmos accessible to all.

NEXT

This genesis whitepupper defines the scope, objectives, use cases, and intents of the PUPMOS token and the Pupmos DAO. Pending reviews, a detailed Distribution Whitepupper will shortly follow the release of this document. The Distribution Whitepupper will define and describe frendrop mechanisms, supply tokenomics, and a novel *fairsig* standard to revolutionize the concept of the strategic reserve as we know it.
